

Pathetv. 1605.

An Almanack and  
Prognostication, for the yeare  
of our Lord God 1605.

Being the first from the leape yeare.

Made and set forth by Arte  
by William Mathew of Reigate  
in the county of Surrey, practitio-  
ner in Physicke, and Student in  
Astronomie.

Rectified by the Meridian of Rei-  
gate, serving most directly for the  
South parts, and generally for  
all England.

*Celum & terra prateribunt sermo-  
nes autem mei nequaquam pra-  
teribunt. Mat. 24.*

Imprinted at London for the  
company of Stationers.

*The contents of this present*  
**Almanack and Prognostication, for the**  
 yeere of our Lord God 1605.

<b>T</b> he Golden number is	10.
The cicle of the Sunne is	18.
The Dominicall letter is	1.
Indictio Romani is	3.
Interuallum or space betwene Christmas and Shroue	
Sunday is fixe weekes and 5. dayes.	
Shrouesunday the 1. day of February.	
After shrouesunday is the 11st. day of February.	
Quadragesima, or the first Sunday in Lent is the 23st. day	
of February.	
After day is the 23rd. day of March.	
Ascension day the 25th. day of May.	
Whitsunday the 26th. day of May.	
Corpus Christi the 27th. of May.	
Aduent Sunday the first day of December.	
Certaine rules of Astrologie very necessary.	
Item for rising and setting of the Sunne.	
Item for rising and setting of the Moone.	
A perfect rule to know the Planetary houres throughout	
the whole yeare.	
Item there will be three Eclipses this yeere to witte two of	
th: Moone and one of the same, which time shall be set	
downe in the Prognostication.	
Dangerous dayes to fall sicke in, or to take Physicke, are	
marked in the Hallender with this markes ☿.	

# A brieft and necessarie rule to know the beginning and end- ing of every Terme, with their Returnes.

**Quillasse Terme** beginneth the xxiij. day of Iannarie (if it be not Sunday) which is being, it is then referred vnto the day following, and endeth the xij. of February. Which terme hath foure returnes. That is to say.

Octabis Hillarij.	}	Craftino Purifica:
Quind. Hillarij.		Octabis Purifica:

**Walter Terme** beginneth xliij. dayes after Easter, and endeth the Sunday next after Ascencion daye. And hath fise Returnes. That is to say.

Quind. Pasche.	}	Mense Pasche.	}	Quinqe Pasche.
Tres Pasche.		Craftin. Ascencion.		

**Trinitie Terme** beginneth the Friday next after Trinitie Sundaye, and endeth the Wednesday last night after. And hath foure returnes. That is to say.

Craft. Trinitatis.	}	Quind. Trinitatis.
Octab. Trinitatis.		Tres Trinitatis.

**Michaelmas Terme** beginneth the ix. day of October (if it be not Sunday, as is aforesaid) and endeth the xxviii. of Nouember. And hath eight Returnes. That is to say.

Octabis Michael.	}	Craft. Animarum.
Quind. Michael.		Craft. Martini.
Tres Michael.		Octa. Martini.
Mense Michael.		Quind. Martini.

**Note** also that the Exchequer openeth eight dayes before any Terme begin, except Trinitie Terme, in which it openeth but foure dayes before.

**The Anotamie of mans**  
**body, as the parts thereof are gouerned**  
**by the xii. Celestiall Signes.**

**Aries. The head and face.**

**Taurus.**  
**Neck &**  
**cheere.**

**Cancer.**  
**Breast**  
**Stomack**  
**& lungs.**

**Virgo.**

Mathew. 1605.

*A Prognostication*  
for the yeere of our Lord  
God, being the first from  
the leape yeare,  
1605.

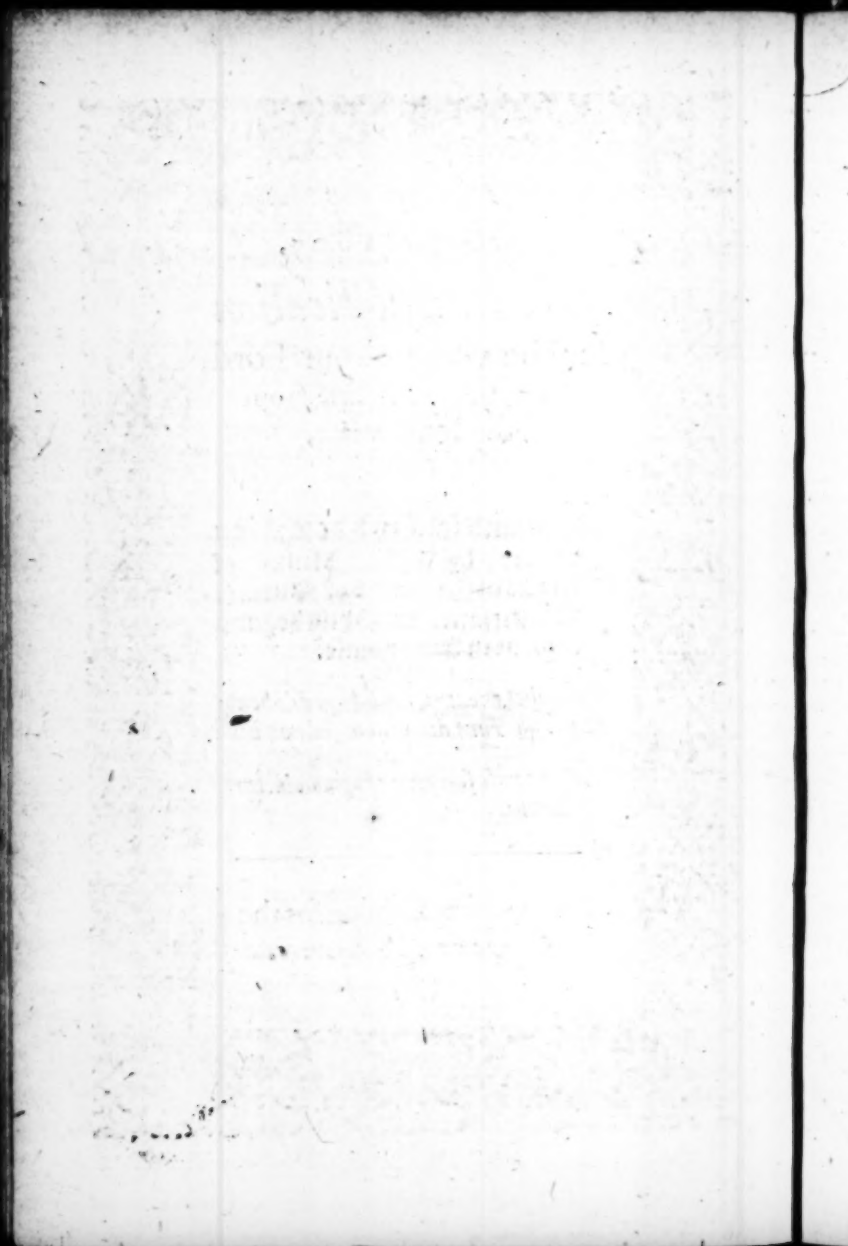

Made and set forth according  
to Art, by William Mathew of  
Rigate in the county of Surrey,  
Practitioner in Physicke, and  
Student in Astronomie.

*Non habet eventus, sordida præda bonos  
Multi querunt diu viuere: sed non bene*

*Atque in se sua per vestigia voluitur  
annus.*

---

Imprinted at London for the  
Companie of Stationers.  
(∴)

  
To the right Honourable *William Lord Howard*  
of *Effingham*, my singuler good Lord,  
*many ioyfull and happie yeeres*  
*with all increase of*  
*honour.*

**R**ight Honourable, I did thinke meet and necessa-  
rie to shew vnto your good Lordship the right  
order of *Phlebotomye*, or blood-letting, and the  
vilitie and profite that may ensue thereof, and  
to open the rashnesse and boldnesse of such as  
take vpon them for to let blood, and what danger may en-  
sue thereby, by reason that they haue neither knowledge,  
learning, nor experience therein. I say, let blood at no  
time without great cause; if the Patient will be let blood,  
doe it, by the counsell of the learned Phisition. But the  
meaner sort doth for euerie cause goe to the Barbor to be  
let blood without counsell, and diuers times taketh much  
hurt thereby: For there is neither age, strength, complexi-  
on or diet counted amongest such Blood-letters, but euen  
as the blinde man doth start the Hare, (hit or misse) they  
will aduenture without counsell: for sometime when the  
poore Patient cannot spare foure ounces of blood, they  
wil take frō him x. or xij. ounces: & at another time, when  
the Patient may well spare xij. or xiiij. ounces, then they  
wil take about vi. or vij. ounces, as I know such blood-suc-  
kers (Blood-letters I would say) of mine own knowledge. I  
know such Blood-letters not far frō me, where I doe dwell.  
Therefore I wold aduise al men, to take care of themselues,  
& not to be let blood without good aduise of the learned  
Phisition. For if you doe demandaund of such Blood-letters  
which neuer haue studied the same Art, what a vaine is,

### *The Epistle Dedicatorie.*

and from whence it doth proceede, and to what effect, and what muscle and danger is vnder euerie vaine, (you speake hebrew to such) I dare warrant your Lordship, not one amongest Twentie of them can make a direct answere. But if they can pricke or open a vaine, and make it bleede, then they thinke themselues verie cunning: let euerie one that loue themselues take heed of such Blood-letters, except that they can answere to such thinges as I haue set downe. For first it is not vnknowne to them which haue seen an *Anatomic*, how that there be in mans bodie, two kinds of vaines, generall, and speciall; generall or comon vaines, are three which appeare in the midst of euerie mans arme, on the inner-side, and of them the highest is called of the learned *Cephalica*, or the head-vaine; and the lowest of all three is called commonly *Basilica* or *Regia*, in the right Arme by another name *Epatica*, or the vaine of the Liuer, but in the left Arme it is called *Pulmatica*, the vaine of the lungs. The third common Vaine lyeth betwene the other two in the midst, and it is named *Cor-diac*, or the Vaine of the heart.

The first Vaine that I did speake of, that is to say, *Cephalica*, is a vaine most apt to be let blood in all the higher parts of mans bodie, and it is opened for the head-ache and the eyes: This Vaine, if you touch it, and if it bleed not at the first stroke, you may be bold to strike it once againe, for there is no iopardie of cutting of any muscle, and if you cannot finde the same vaine, take his braunch that is about the thumbes end.

The Vaine *Epatica*, emptieth from the middle part of all the bodie, and it is alwaies opened against diseases of the stomack and spleen, but you ought therein to be diligent that there be no muscle pierced; if you cannot spie it in the arme, seeke the braunch betwene the little finger  
and

### *The Epistle Dedicatorie.*

and the fourth.

The *Cordiate* Vaine draweth blood aswell from beneath as from aboue, for it is compounded of *Cephalica* and *Epatica* : but in piercing of it you must exceedingly take good heede, for vnder it is a certaine muscle, which if it be verie deeply cut, the Patient is in great ieopardie of his life. Right Honourable, these few lynes, I did thinke good to write, because such Blood-letters should take good heede, how that they doe let blood, before that they doe enter into such action; for blood is the principall humour in man, the life of man consisteth in the blood, for diuers times the blood being let out of the bodie by the vnlearned, without any good order, or diet appointed after, and the Patient being full of euill humors, doth encrease farre worser blood than he had before; then great diseases must needs follow. But if you must needs vse *Phlebotomye*, take heede to these rules following: It must be done in a temperate time, neither too cold, neither too extreame hot weather; therefore the Spring, and the fall of the lease: also the aspects of the Planets, are diligently to be marked in blood-letting.

And finally you must take heede in letting of blood, that the Moone doth not apply to the Lord of the eight house, or death. Also the opening of a vaine when the Moone is voide of course, it is not good, neither to give any purgation at that time. And also in the howers of badde Planets, as *Saturne* and *Mars*, it is not good to let blood. And when one is let blood, he must not sleepe in six howers after it, least the fume engendred by sleepe, ascend into the head and hurt the braines. Also hee must take heede that he make not the gash too deep, least he hurt a synew, or an Artery-string vnder the vaine; for hurting of a synew, causeth a mortall crampe, or losse of a member, as

### *The Epistle Dedicatorie.*

**A**nd the Or a finger, And the hurting of an Artery-string  
causeth bleeding incurable. Also the party ought not  
immediately to eate after he is let blood : but he must ta-  
rie vntill the humours be in quiet, least the meate afore it  
be digested, be drawne together with the blood, to succor  
the hurt member.

Also in the time of Pestilence when the bodie is infec-  
ted, you must not haue respect to the signe, the day, houre;  
but whether the Moone bee there or nor, or whatsoeuer  
aspect bee in the Planets, let the partie let blood forth-  
with in the name of God, therefore take heed at the begin-  
ning, as the Prouerbe is,

*Principiis obsta sero medicina paratur,  
Cum mala per longas inualuere moras.*

Least I should be tedious, I will conclude remern-  
bring that *Protogenes* was reprooued, though otherwise,  
a notable Painter, because hee could not plucke his pen-  
nill from the Picture, and I peradventure of some may  
be misliked, that I could not remooue my pen from the  
paper; I was minded to set downe vnto your Lordship the  
workes of Astronomie and the erecting of the celestiaall  
figure, verie pleasant to behold, but I will referre the  
same vntill the next yeare. Now desiring your Honour  
to receiue this with fauour, and to read it with friendly-  
nesse, this simple Booke which I offer vnto your Ho-  
nour, as outward signe of mine inward good will; so  
shall you encourage me to present your Honour with the  
work of Astronomy, & the celestial figure before named.

The God of Heauen bleesse and prosper your Honour,  
long to continue, and send you in Heauen most assured  
happinesse. Amen.

*At your Lordships commaundement William Mathew  
Practitioner in Physicke and Student in Astronomie.*

*Phisicall observations.*

**C**ertain elections are to be chosen by the course of the Moon in any signe of the Zodiacke, and first of blood-letting. In the Spring time let blood at the right side: in the fall of the leafe, at the left side.

From the change to the first quarter, a waste time to let young men bleed.

From the first quarter to the fall, good for middle-age.

From the full to the last quarter, apt for aged folks.

From the last quarter to the new Moon of change, best for old folks.

The Stone in  $\left\{ \begin{array}{c} Y \\ X \end{array} \right\}$  For the Phlegmatick, the head and thighs excepted.

The Moons in  For the melancholique, butackes and legges excepted.

The Moone in  For the Chollerique: breast, members and loote excropt.

Laudable aspects of the Planets, are to be  
 observed in letting of blood, and taking  
*of Purgations.*

The conjunction  
of the Moon  
with

77  
88

Is the best time to let blood, so  
that Venus bee not combust, or  
under the beames of the Sunne.

## A Prognostication.

♈ Dragons head. ♏ Dragons taile.

A Description of the foure quarters of the  
yeere, and a Declaration of the disposi-  
*tion of the same.*

**T**he Winter quarter, wherewith we vsually be-  
gin the yeere, made entrance the last yeere  
1604. the xi. day of December, betweene the  
houres of fve and sixe of the clocke at night, which  
time the sunne made his entrance into the first mi-  
nute of Capricorne, and it is the shortest day in the  
yeere, and so the Winter doth continue vntill the  
tenth day of March following.

This part of this yeere by naturall inclinatio, is  
of qualitie cold and moyst, forasmuch as I doe find  
a cold and a moyst signe which is Cancer, triplicitie  
of the water, in the ascendent or first house, and the  
Moone Ladie of the Ascendent placed in the first  
house, which is the house of sicknesse: Mars placed in  
the viii. house, in Aquarie the house of Saturne: Sol,  
Iupiter, and Saturne placed in the vi. house: Venus &  
Mercurie in the first house. I doe gather it will be a  
moyst Winter, much raine, and snow, and cold blu-  
sting windes out of the North and north-east.  
The chiefest sickneses at this time is superfluous  
moyster, reumes, coughes, stiches, paine in the  
sides, head aches, and palsies, much pain in the feet  
and legges.

Of the Spring:

**T**he Spring beginneth this yeere about the  
tenth day of March about fve of the clocke in  
the after-noon of the same day, then the sun doth  
enter into the first minute of Aries, at which day the  
sunne doth rise at vi. of the clocke, and setterh at  
vi. of the clocke, so making the day and night equall  
throughout all the world; and the Spring conti-  
nueth

## A Prognostication.

mueth vntill the xii. day of June next following. This quarter is naturally hot and moyst, and the best time (as Hippocrates saith) for to take Phisicke.

Concerning the temperature of the weather, I doe finde it will be a cold and a drie Spring, cloudie, and much blustering windes, forasmuch as I doe find a cold and a drie earthly signe in the ascendent which is Virgo, a triplicitie of the earth melancholy, & nature cold and drie, & Mercurie Lord of the ascendent placed in Pisces, entring into the first house, the sunne entring into the vii. house, Mars placed in his owne house, Aries being the viii. house, the house of death, Saturne and Iupiter being in the fourth house vnder the earth, and the Moone in the eight house with Mars.

The diseases which are like to raigne at this time will be hot feauers, plurisies, quinsies: and the Pestilent feauer in most places, the Scitica, and podagra, and such like in old folkes.

### Prediction of Summer.

Summer the third part of the yeere, will take his beginning the xii. day of June, about 2. of the clocke in the morning, for then the sunne doth enter into the first minute of Cancer, and will continue vntill the xiii. day of September, which time then is the longest day, & shortest night, this time by his proper nature, is hot & drie, of the sere triplicitie.

Concerning the disposition of the weather, I doe gather it will be a moyst & a temperate summer, much small raine, because I doe find in the ascendent or first house Gemini, a hot & a moist signe, & Mercurie lord of the same signe placed in Cancer in the second house, a watry signe, & the sun placed in the 2. house, Iupiter placed in the 8. house, Mars & Venus in the

Mathew. 1607.

the ascendent, Saturne in the 7. house, & the Moone in the sixt house. So that the weather will be hot & moist, which will breed many diseases, & strange burning feauers of all sorts, much paine in the head, and also sore eies, &c.

Haruest, or fall of the Lease.

**H**aruest, the fourth part of y<sup>e</sup> yere, doth take his beginning the 13. day of Septēber about 12. of the clocke at noone, & endeth y<sup>e</sup> 12. day of December then next following, for then y<sup>e</sup> sun doth enter into the Equinoctiall signe of Libra for then y<sup>e</sup> daies and nights be of one length. For y<sup>e</sup> disposition of the weather, I do find Sagitary in y<sup>e</sup> ascendent, being a hot & a drye signe triplicity of y<sup>e</sup> fire, & Iupiter lord of y<sup>e</sup> same signe, placed in Capricorne in y<sup>e</sup> 1. house; the Moone placed in Aquarie in y<sup>e</sup> 3. house, Mars in y<sup>e</sup> 9. house; Sol venus, & Mercurie, in the 10. house; & Saturne in the ascendent, signifieth that Winter shalbe long, & much snow in that season, and likely hood of land-floods through much raine then falling. The spring windey, the summer weat, and the haruest abounding in grosse and rotten humours (so that a most grieuous plague is to be feared, & especially of women, & the likely-hood of many shipw:akes, some scarstie of fruits of y<sup>e</sup> trees, also supposed to be an earth-quake, sudden death of cattell, fearful fiers, & that y<sup>e</sup> plague to be grieuous this yere in diuers places: also wood wil be deare, & yet there wil be store and plenty and good cheape of corne & victuals, of hony, oyle, wine, peason, beanes, & betches, and garden-herbes. God of his mercie turne all to his pleasure, & our profite, so that after this troublesome life, wee may haue with him life euerglasting. Amen.

Here

*Here followeth briefly certaine*  
rules, working by Astronomie to be had in me-  
morie for auoiding cariage of Bookes.

• A readie way to get the Golden number  
or Prime without a Table.

**A**Dde vnto the yeere of our Lord 1. then deuide  
the summe by 19. the remaine is the Prime  
or Golden number.

The Epact is thus euer found.

**T**O finde out the Epact of each yeere, doe thus,  
to the Epact of the yeare that last went before  
that yeere, for which you would finde the Epact,  
adde xi. and the sum of these two make the Epact,  
if it surmount 30. then take 30. out, & that which  
resteth aboue 30. is the Epact you desire.

**A**Rule to know the change, full, and quarters,  
by the Epact euerie moneth in the  
yeere, without Booke.

**A**Dde to the dayes of your moneth the Epact,  
and also as many dayes more as are moneths  
from March to your moneth, and substract  
xxx. if you may, the age of the Moone then re-  
maines.

*A*

*A Table to know what Planets  
rules any houre throughout the whole yeere.*

Gouernours of the day.	Sunday	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saterday.	Rulers of the night.
Sol.	1	12	9	0	10	0	11	Jupiter.
Venus.	2	0	10	0	11	1	12	Mars.
Mercury.	3	0	11	1	12	2	0	Sol.
Luna.	4	1	12	2	0	3	0	Venus.
Saturne.	5	2	0	3	0	4	1	Mercury.
Jupiter.	5	3	0	4	1	5	2	Luna.
Mars.	7	4	1	5	2	6	3	Saturne.
Sol.	8	5	2	6	3	7	4	Jupiter.
Venus.	9	6	3	7	4	8	5	Mars.
Mercury.	10	7	4	8	5	9	6	Sol.
Luna.	11	8	5	9	6	10	7	Venus.
Saturne.	12	9	6	10	7	11	8	Mercury.
Jupiter.	13	10	7	11	8	12	9	Luna.
Mars.	14	11	8	12	9	0	10	Saturne.

The vse of this Table.

**V**nder the day of your request, seeke the houre  
that ye desire, then on the left side right there  
against shall ye see the Planet that gouernes  
that houre by day, and at the right side the Planet  
that rules by night (as thus) On Thursday the  
third houre of the day rules Sol, and the eight houre  
of the night gouernes Luna, and so of the rest.

ATa.

**A Table to know the length of the planetarie  
houre, from the shortest day and lon-  
gest night, till the longest day and shortest  
night for all the yeere.**

M.	0	12.	24.	36.	48.
H.	H.M.	H.M.	H.M.	H.M.	H.M.
7	0.35	0.36	0.37	0.38	0.39
8	0.40	0.41	0.42	0.43	0.44
9	0.45	0.46	0.47	0.48	0.49
10	0.50	0.51	0.52	0.53	0.54
11	0.55	0.56	0.57	0.58	0.59
12	1. 0	1. 1	1. 2	1. 3	1. 4
13	1.50	1. 6	1. 7	1. 8	1. 9
14	1.29	1.11	1.12	1.13	1.14
15	1.25	1.16	1.17	1.18	1.19
16	1.20	1.21	1.22	1.13	1.24
17	1.25	1.26	1.27	1.28	1.29

The vse of this Table.

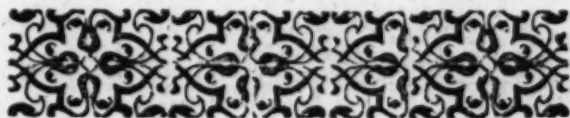

**K** Nowe the length of the day or night that yee  
require by the Table proceeding in houres  
and minutes, and therewith enter this Ta-  
ble the houre and the nearest minute at the head, and  
then descend right against your houre, and there in  
the common Angle, shall yee finde the houre and  
minute or minutes, onely that the planet raies  
by the houre of the clockes,

As

Mathew. 1605.

As for example.

**T**he 12. day of June, the day is 16. houres long and 20. minutes, wherewith I enter this Table as is shewed, and in the Angle, I finde 1. houre 22. minutes, which sheweth that a planet that day rules an houre and a quarter, and 7. minutes of the clocke. Also the same night I finde it but 7. houres 40. minutes, wherewith I enter this Table with 7. at his side, and 36. minutes at the head (for that is nearest) and in the common Angle I finde but onely 38. minutes, which sheweth that a planet that night rules but onely halfe an houre, and 8. minutes of the clocke, and so of the rest.

A Table

**A Table to know how long the Moone shineth,  
and when shee riseth and setteth throughout  
the yeere: a notable rule and worthy to be noted.**

The age of the Moone encre.	The houres she shineth.	Her age decreasing.
Luna	H.m.	luna
1	0.48	29.
2	1. 6	28.
3	2.24	27.
4	3.12	26.
5	4. 0	25.
6	4.48	24.
7	5.36	23.
8	6.24	22.
9	7.12	21.
10	8. 0	20.
11	8.48	19.
12	9.36	18.
13	10.24	17.
14	11.12	16.
15	12. 0	15.

The vse of this Table is thus, the age of  $\text{y}^{\text{e}}$  Moone once known and found in the side of the Table then answering therunto, shall yee see the houres and minutes of her shining to bee counted from the sun setting, all the increasing to the full, and til then she shineth in the evening, & after the full, she shineth before the sun doth rise, as the Table sheweth: and for rising & setting doe thus. All the increase adde to  $\text{y}^{\text{e}}$  houres of  $\text{y}^{\text{e}}$  sun rising, the houres found in the Table, and it sheweth the houres of her rising. Again adde to the houres of the sun setting, the houres and minutes found in the Table, & that is the houres of her setting. Then after the full for her rising, doe thus: from the sun rising take the houres found in the Table, and the rest sheweth the rising and from the houre of the Sunne setting, take the houres found in the Table, borrowing 12. If the Substraction cannot else bee made, and the rest sheweth the setting of the Moone.

All these aforesaid by example shall be made  
plaine, that euerie one may vnderstand.

**T**he xxix. day of March this yeare, the Moone  
is xx. daies old, wherewith I enter the Table,  
the Moone decreasing, and I finde viii. houres  
answearing thereunto, so I say the Moone doth  
shine viii. houres in the morning before the Sunne  
doth rise, and the same day the Sunne doth rise a-  
bout nine of the clocke and xxxiii. minutes, wherewith  
I put 12. else could not the subtraction be made,  
and it maketh xvii. houres, from the which I take  
8. houres, and there resteth 9. houres, so then  
the Moone doth rise at nine of the clocke xxxiii. mi-  
nutes before midnight the same day.

Another Example.

**T**he xix. day of March the Moone is x. daies  
old this yeere, wherewith I enter the Table  
the Moone encreasing, & I finde viii. houres an-  
swering therunto, which sheweth that the moon doth  
shine viii. houres in the evening after the Sunne  
is set, and the Sunne the same day doth set about  
vi. of the clocke xx. minutes, to the which I put  
viii. the houres of the Table, and it maketh xiii.  
houres, from which I take xii. which is midnight,  
and there resteth two houres, which sheweth the  
Moone shall set the same day at two of the clocke  
after midnight. Likewise the same day the Sunne  
doth rise about nine of the clocke xliiii. minutes, to  
which

A Prognostication.

Whiche Tyme is xlii. and it maketh xlii. houres, and  
xliii. minutes. Count to Tyme xlii. (for that is none-  
tyde) and there resteth one houre & xliii. minutes,  
sheweth that at One of the clocke xliii minutes af-  
ter noone the Moone riseth, though to vs vnseene:  
and so of all other times.

A notable Rule to finde out Easter  
for euer.

**I**n March after the first C.  
Take the Prime where euer it be,  
And if the Prime on the Sunday be,  
Then reckon that for one of the three.

*Mors piorum, est finis malorum.*

God saue the King.
